Katerina Pramataris

Partner, Uni.Fund, and Associate Professor, Athens University
of Economics and Business

John T. McEntire

Director of Industry Development and Knowledge Transfer, Qatar Foundation

Difficulties in turning intellectual property developed by universities into commercial application is one of the greatest bottlenecks to the creation of globally successful start-ups. It is critical for the academic start-ups to work with corporate ventures or venture capital companies who have a strong portfolio in investment in deep-tech space. This webinar will focus on corporate or conventional VC who invest in deep tech companies built around academic innovations where experienced investors will discuss what they are typically looking for in these early-stage companies while they are making investment decisions.
